## ANNEXURE-IV

### NORMALIZATION PROCEDURE

Candidates are aware that the APEAPCET-2022 (MPC and Bi.PC Streams) are conducted from 19-09-2022 to 25-08-2022 in multiple sessions.

APEAPCET-2022 is being conducted in multiple sessions based on the same syllabus, same pattern for candidates having the same eligibility criteria. A candidate will be eligible to appear only in one session. Since the question paper will be different for each session, there is a possibility that the candidates compare themselves about the variation in the difficulty level of questions. However, it may be noted that utmost care will be taken so that all the papers are of same standard. Further, it is decided to adopt a normalization process to eliminate any such variations in the difficulty level of various sessions.

#### **What is Normalization?**

Normalization, as used in the Indian context, is a process for ensuring the students are neither advantaged nor disadvantaged by the difficulty of examinations conducted in multiple sessions. This process is based on a simple formula that has been adopted as recommended by the experts from reputed educational institutions at all India level and Universities. The process is being implemented in other all India / Nationwide entrance tests for admission into undergraduate and graduate professional courses. The normalization process ranks all the candidates across all sessions on a comparative scale. In any normalization process, the marks of the easier session may be reduced marginally and the marks of the harder paper may increase marginally on the global level, depending on the average performance in each session. If there is no much difference in the averages between the two sessions then there won't be much difference in the normalized marks as well. Normalizing marks would justify the candidates while protecting their actual performance.

#### **AP EAPCET marks Normalization Process:**

The main aim of the normalization is to justify the candidates who got a difficult paper compared to an easier paper. Hence, the task is to rationalize in the best possible sense and rank the candidates based on the global performance. Various national level examination bodies like JEE (Main), GATE, etc. are currently adopting such normalization procedures. Correspondingly, the EAPCET committee has deliberated extensively and decided to use the following normalization procedure.

Normalized Marks of the candidate

$$GMS + \frac{\text{Top Average Global} - GMS}{\text{Top Average Session} - SMS} \times (\text{Marks Obtained by Candidate} - SMS)$$

where

SMS: (Average + Standard Deviation) of the session in which the candidate belongs to

GMS: (Average + Standard Deviation) of all the candidates across all sessions together

Top Average Session: Average marks of the top 0.1% of the candidates in the session in

which the candidate belongs to

Top Average Global: Average marks of the top 0.1% of all the candidates across all sessions Together

**Weightage for assigning merit ranks:**

75% of AP EAPCET normalized marks and 25% of Intermediate Marks in group subjects to prepare the rank.

**Note:**

➤ For Candidates having qualifying marks in AP EAPCET-2022, if after normalization, the marks(s) in any individual subject(s) become negative, then the normalized mark(s) in the respective subject(s) are treated as zero. However, total marks in three subjects are considered as EAPCET marks.

➤ For the candidates for whom there is no qualifying cut off in AP EAPCET - 2022, if the marks in all the three subjects after normalization goes below zero (negative), the total marks is treated as zero and the rank is assigned. If the tie persists then APEAPCET 2022 normalization marks (though negative are considered for breaking the tie).

**Demonstration with a sample data:**

The following is based on a sample data to explain the normalization process. The data is based on almost equal number of candidates in all the four sessions. The normalization is shown subject wise so that students get the benefit based on subject wise performance rather than the entire paper in a session.

Averages and Standard Deviations in a particular session and averages of top 0.1% candidates of a particular session, Global Average and Standard Deviations of all sessions together, Averages of top 0.1% candidates in all sessions is given in Table

1. Example data of normalized marks is shown in Table 2 to Table 5.
